

THE DESK TOP VANGUARD

The brief for the VANGUARD was to create a desk top unit with as many features of the very successful Guardian camera but in a manual form. Although it is available in a motorised format, primarily it is a solid and simple desktop copy stand that will utilise any of our available camera head options. Including Video and digital capture systems with the maximum speed and efficiency, while maintaining our high standard of book handling for bound volumes or flat documents.

When using the 16 mega pixel video capture system, around 500-600 documents an hour can be captured without any mechanical shutter function, making it an ideal set up for a production process where speed of capture is paramount.

The top book glass can be moved away from the document to allow the capture of exceptionally delicate volumes without pressure, while adjustable LED daylight balanced and diffused constant lighting, at a relatively low level (especially the 'one shot' systems) ensures comfort for the operator and safety for the document with no flickering or moving lights in the production environment. Interchangeable lenses, ensure that a range of document sizes, even small negatives, are perfectly captured at the highest image quality.

FAST AND EFFICIENT

Vanguard Specifications	
Dimensions	Desktop
Maximum Height	1030 mm.
Width (light arms lowered)	1150 mm.
Width (light arms raised)	750 mm.
Maximum document size:	620x440 mm.
Lighting	Low voltage Cool LED
Depth	810 mm.
Electrical	24v via lighting transformer
Weight	TBA

Camera options

16 mega pixel Video
 50 mega pixel Video
 65+ mega pixel **PhaseOne**
 One shot cameras.
 A range of digital cameras to suit your budget or particular resolution requirements
